

Hot work is any operation that generates heat, spark, or open flame. This includes, but is not necessarily limited to, welding, cutting, grinding, soldering, torch applied roofing, heat gun use, and similar activities.

Before initiating Hot Work, determine if there is a safer way to complete the work.

Date: _____ Location: _____ Job # _____

Type of Hot Work:

☐ Soldering ☐ Welding ☐ Cutting ☐ Roofing ☐ Other

Hot work Precautions Check List:

Complete prior to any Hot Work beginning in an area not designated for Hot Work. Check each box where the statement is true. If any statements are not true, then Hot Work should not begin until that issue has been safely resolved.

Required Safety Precautions:

- ☐ Fire suppression sprinklers, fire hoses, or fire extinguishers are available and operable.
- ☐ Hot Work equipment is operable and in good repair.
- ☐ Smoke/fire detectors in the immediate area of the Hot Work have been temporarily disabled until Hot Work is complete.
- ☐ Building occupants have been protected or isolated from the Hot Work area.
- ☐ Drums, barrels, and tanks have been cleaned and purged of flammables and toxics. All tank feeds are closed and the tank is vented.

Required within 35 feet:

- ☐ Area within 35 feet of the work area has been properly swept to remove any combustible debris.
- ☐ Flammable and ignitable materials and debris have been moved at least 35 feet from the Hot Work area or covered and protected with fire resistant material.
- ☐ Cracks or holes in floors, walls, and ceilings (including duct work) are covered or plugged.
- ☐ Combustible floors covered with fire-resistive material.

Required within 50 feet:

- ☐ Explosives, compressed gas cylinders, or stored fuel have been moved at least 50 feet from the Hot Work area, or have been protected from the Hot Work.

Work on walls or ceilings:

- ☐ Construction is noncombustible and has no combustible covering or insulation
- ☐ Areas adjacent to walls being worked on are checked for combustibles and any combustibles are either removed or protected.

Fire Watch required during Hot Work and a minimum of 30 minutes following completion of work.

☐ Yes ☐ No Name: _____

A Fire Watch is needed for all Hot Work activities unless the Hot Work area has no fire hazards or combustible exposures. The Fire Watch must have fire extinguishing equipment readily available and be trained in its use. They must also be familiar with the procedures for sounding an alarm in the event of a fire. The Fire Watch will watch for fires in the exposed area and are responsible for extinguishing spot fires and communicating alarms immediately. The Fire Watch may be assigned other duties while in the Hot Work area, however they need to be vigilant in watching for fires.

When work is completed:

- Inspect work area and potentially affected adjacent areas for fire, fire damage, or potential for fire.
- Reactivate smoke/fire detectors that were disabled because of Hot Work.

I verify that the above location has been examined and the necessary precautions taken to prevent the outbreak of fire due to Hot Work.
